Are NSAIDs risky for your kidneys?

Common NSAIDs are ibuprofen (Motrin®, Advil®) & naproxen (Aleve®).

Know your risk

- Do you have kidney disease, diabetes, and/or high blood pressure? **yes or no?**
- Do you take water pills and/or pills with names that end in ‘pril’ or ‘sartan’?

Talk to your pharmacist about medications you can take to relieve pain safely.

Non-Steroidal Anti-Inflammatory Drugs treat inflammation due to short term pain.

NSAIDs greatly increase your risk of kidney problems including kidney failure.

Avoid using NSAIDs even for short-term use.

It is likely safe for your kidneys for you to take NSAIDs short-term.

When combined with NSAIDs, some medical conditions and medications increase risk for kidney damage.
